Projects in Progress

1. Kruger, L., **Li, C.**, & Research Team. High Stakes Testing: Risk, Resilience, and Culture. The purpose of our research is to unravel the mystery of why some individuals give up after an academic failure and others persevere and eventually succeed. More specifically, we are investigating the risk and protective factors that lead to either success or failure on high school exit exams among youth from low-income urban communities. Tens of thousands of students are denied their high school diplomas each year because of HSEEs. Most of these

students are either English language learners, have disabilities or are from racial minority groups. High stakes testing is one of the major social justice issues of our time.

2. **Li, C.**, Cai, Q., Li, X. Kimble, E, Zhao, H., Ma, Y. et al. Interdisciplinary collaboration: Using bilingual (Chinese and English) guided meditation practice to improve students' learning and wellbeing in the classroom. So far we have completed 5 years of preliminary studies in the classrooms. Our collaboration team has been growing, including colleagues in the U.S. and China. More sites have conducted formal exploration and collected data (Northeastern University, A high school in the U.S., Zhengzhou University; Tianjin University of Commerce, now a high school in Shandong, China). Presented at NU conference on evidence-based teaching, APA, ISPA, one study report accepted for publication.
